Five Reasons to Use Health Risk Impact Overview (H.R.I.O)

1. **Real-Time Global Overview**
   - Illustrates exposure against the risk level of any country.

2. **Open Purchase Order Exposure**
   - Data can be drilled down to individual purchase order level.

3. **At-a-Glance Dashboards**
   - Fully adaptable to meet your own specific requirements.

4. **Upload Your Own Data**
   - Data can also be uploaded in a CSV format.

5. **Fully Configurable**
   - Add in additional fields from your SAP environment.

Gain a Real-Time Overview of Your Contract Exposure

Integrated with SAP Ariba and featuring a live WHO COVID-19 case data feed, our Health Risk Impact Overview (H.R.I.O) application provides a comprehensive overview of your supply chain exposure against the risk level of any country, at both an aggregated and individual open purchase order level.

It is an easy to use, intuitive cloud-based application that provides users with an easy to use user interface.

How it Works

**SAP Ariba**
- SAP Ariba Integration

**World Health Organization**
- WHO COVID-19 Overlay

**Supply Chain Exposure**
- Quantify Supply Risk

**Engage with Suppliers**

With the impact of COVID-19 shifting on a daily basis, it is imperative that your buyers closely monitor the situation and the impact this may have on both short-term and long-term demand.

By overlaying real-time 3rd party data, such as the number of live and new cases of the coronavirus, you will be able to establish a clearer picture of the potential impacts to the supply chain and allow you to develop the appropriate contingency plans.

Mobile friendly, the application can run on any device, supporting remote working and 24/7 access.

The true value that is driven by the application is the power to provide a dynamic experience. Rather than simply providing static information, you can filter and cross reference the data to deliver the level of insight you require. All data can be drilled down to an individual purchase order level, and if required data extracts can be exported to Excel for further analysis. Any additional fields from within your SAP and Non-SAP environment can also be added to the core elements already included.

Results from your risk assessment can then be used to engage with our Supply Continuity Survey to establish a detailed understanding of both the current and predicted future state of your supply chain. This will enable you to validate existing Business Continuity and Recovery Plans (BCP) and follow up with high-risk suppliers.
