Go from data to insights, and insights to action with **Category Manager Dashboard**

Business intelligence is the key component in the drive to be agile, competitive and effective. As businesses grow, it can become very difficult to manage data being generated regularly. This in turn creates a road-block to harnessing data for driving business decisions. In addition, the siloing effect of reporting structures across enterprises creates a situation, where key decision makers are forced to make decisions based on partially correct data.

Category Manager Dashboard provides valuable insights and reporting, plus the ability to integrate aggregated data across Sourcing, Contracts, Spend, Performance and Risk. It provides a status for each project to manage the category of spend, including a display of all associated business documents, combined with fully scalable and highly configurable dashboard templates.

### Five reasons to use **Category Manager Dashboard**

- **Eliminate siloed based reporting**
  Make decisions based on a holistic view of your operations, provided through aggregated data from multiple sources.

- **Improve awareness**
  Instantly gain transparency of what is or isn’t working.

- **Increase responsiveness**
  Real-time, reliable results allow a more pro-active decision making approach.

- **Gain confidence and speed**
  Data driven decisions increase the speed of decision making through the quick buy-in of all parties.

- **Reduce costs**
  Access to the dashboards is managed through a multi-tenant agreement, which significantly reduces the cost of implementation.
